

Telecommunications Services

Cabco is a leading provider of Telecommunications Services across Atlantic Canada, specializing in Fibre Optic Services, Contract Installation and Outside Plant Construction.

From fibre optic cabling and splicing, to pole top cable placement and backbone installation, Cabco's skilled teams ensure our contract partners and customers receive quality, reliability and on-schedule project completion.

Fibre Optic Services

Network design, splicing and installation for all types of systems (indoor and outdoor). Cabco's fleet includes modern, portable fibre optic splicing vehicles for any job.

- Single mode and multi-mode fusion splicing
- Single mode and multi-mode mechanical connectors
- OTDR testing, troubleshooting and documentation
- Optical power meter testing
- Outside plant and head-end builds and renovations
- Private network fibre optic backbone builds

Contract Installation

Sub-contractor services to regional and national telecommunications, security, project management and technology infrastructure firms across Canada.

Our contract installation teams have experience in backbone infrastructure, telephone, cable television, data networks, wireless and internet service installation for both residential and commercial customers.

Outside Plant Construction

Infrastructure and backbone construction, pole to building service, aerial pole line construction, conduit and manhole installs.

Whether it's a multi-location project, new commercial development or residential multi-dwelling units, Cabco emphasizes collaboration to ensure the client, site engineers, designers and tradespeople involved execute efficiently and safely.

- Site surveys, infrastructure design
- RF, Wireless and CO equipment
- Aerial and conduit installation
- In/out cable lashing & placement
- Network infrastructure installation

Experience counts. Choose Cabco.
